

Generation II (Gen II), Model Year 2006 Honda Civic Hybrid Electric Vehicle Accelerated Reliability Testing – January 2007

Two Gen II Honda Civic hybrid electric vehicles (HEVs) entered Accelerated Reliability testing during July 2006 in one fleet in Arizona. After reaching 160,000 miles each, the two Civic HEVs will have their fuel efficiencies retested on dynamometers (with and without air conditioning) and their batteries will be capacity tested.

One page, vehicle fact sheets and maintenance logs have been posted for the HEVs on nearby [www](#) pages. The information includes: miles driven, fuel economy, operations and maintenance requirements, operating costs, life-cycle costs, and any unique driving issues.

The two Gen II Civic HEVs have been driven a total of 65,000 miles and the cumulative average fuel economy for the two Gen II Civic HEVs is 39.5 miles per gallon.
